Preactor

Delivering on your Promises

Delivering on your promises and gaining customer loyalty is a key success factor for your company. Coping with daily disruptions in the difference between success and failure. Whether it is late delivery of materials, absent staff, broken machines, or the arrival of a new high priority order, you need to assess the impact on your delivery promises fast and take the required action. It's not impossible. A Finite Capacity Scheduling tool will help you meet your objectives.

Preactor - the invaluable scheduling tool

Preactor is one of the world's leading scheduling software packages available to help you to get your manufacturing under control. Control that will bring you benefits of:

- On-time Deliveries
- Lower raw material and work in process
- Higher profits

And how will Preactor do this?

By giving you an electronic tool to visualize and interact with your production plan showing you in detail where bottlenecks are developing, where jobs are getting behind their promised delivery date and give you the ability to test the options to overcome the problems that arise.

Just click on your required scheduling option and Preactor will automatically load jobs to the resources you have available taking into account machines, labour, tooling, shift patterns, energy, in fact anything that could delay production. It will also provide you with a range of reports to analysis schedules and to pass schedule information through for execution at the shop floor.

Low Cost and Fast Return on Investment

Preactor is available at a price point that every company can afford. Small companies with just a few employees are using Preactor while some of the most well known corporations have taken advantage of using Preactor and have achieved a return on investment period measured in weeks not years.

Easy to Use and integrates with your existing software

Preactor has been designed for the user. With more than 3,000 installations, Preactor has gained from the feedback of its users and includes hundreds of features to help you get the best schedule you can and be able to see what will happen in the future. Preactor is designed for integration with your other applications. Running under Windows 95, 98, NT and 2000, Preactor can be configured to receive information from other systems such as ERP or shop floor data collection systems and export schedule information in the required format.

Local Support and in Chinese

Preactor is sold, implemented and supported by a network of partners around the world. These partners will provide you with training and technical support to help you customize Preactor for your application. Preactor is available in a number of languages including Chinese.
